1/2 Ounce	7.50
Trial Packet, 175 Seeds35

OREGON GIANTS — ELLIS SPECIAL

100 Seeds \$1.00

(Only one packet to a customer.)

This EXTRA SPECIAL MIXTURE is personally selected by Mrs. Merton G. Ellis from the very best plants all over the garden. There will be only a limited amount of this seed, for most of it must go in the regular mixture. The regular mixture is extremely satisfactory and this Special Seed will probably be superior only in that the proportion of extra good plants will be higher.

We offer this ELLIS SPECIAL only because of the many requests for specially selected seed, but we hope most of our customers will prefer to order the FINEST FLORISTS' MIXTURE, which we heartily recommend. We feel that our customers will be better satisfied with that mixture on the whole because the packet is much larger and the difference in quality may not be very great.

(We do not list the separate colors nor mail pansy plants.)

Your flower-loving friend would appreciate a Christmas present of a packet of OREGON GIANT PANSY SEED.

33 $\frac{1}{3}$ percent Discount and FREE BULBS

On all orders from our 1932-1933 Bulbalog, you may take a discount of one-third, if your order amounts to \$2.00 or more.

In addition to this discount and in addition to the bulbs you order, if your order is mailed in November, 1932, you may have free a small bulb of Golden Chimes and 2 bulblets of Flying Squadron for each \$5.00 of your remittance.

And in addition to the above, if your order amounts to \$25.00 or more you may have a medium size bulb and 10 bulblets of Golden Chimes and 5 bulblets of Flying Squadron for each \$25.00 of your remittance.

If your order is mailed in December, 1932, you may have all of the above except Flying Squadron. However, if your November remittance has amounted to \$10.00 or more, your December order will be accepted as if placed in November.

On the other side of this sheet you will note what experts think of Golden Chimes. As to Flying Squadron, Mr. Everett Earle Stannard, writer on floral subjects, reports that Flying Squadron in his garden "has opened up florets very close to seven inches in diameter. There are 28 florets on the main spike. Very large, striking and beautiful are the orange salmon flowers of this variety and there is a distinctive big ox-blood red feather in the throat of the mammoth florets. It is exceptionally tall, being shoulder high to a tall man."

Golden Chimes

FREE

(See Over)

"I grow many yellows and have seen virtually all the reputedly good yellows I do not grow, but Golden Chimes is the best of them all in my opinion; in fact it is a better yellow than I had expected ever to see."

The above is from a letter written in Sept., 1932, by Roy Erford, Sec'y of the Washington Gladiolus Society. Mr. Erford wrote also:

"Last spring, I received from you a small-sized bulb of your Golden Chimes. It bloomed on Aug. 17th, at which time it had attained a height of 51 inches. There were 21 buds; florets, 5 inches, six open. It was a wonderful spike with perfect placement of florets, and, from the standpoint of beauty, in a class by itself among the yellows." In a later letter Mr. Erford writes:

'I feel that I did not overstate the merits of Golden Chimes. I just can't keep from waxing enthusiastic over that variety. When it bloomed for me, I rubbed my eyes to make sure I was awake and not dreaming. It has an abundance of what may be described as charm. I don't think anybody ever produced anything better than Golden Chimes.'

Mr. Erford has been growing a lot of varieties for several years, growing at least 200 kinds each year, and keeps a careful record of each variety each year by means of a card-index system. Hence he knows Glads, and speaks with authority concerning the new ones.

Another authority who has an extra fine collection, Prof. J. C. Gould of Mandan, N. Dakota, writes:

"The big Golden Chimes would have been right at its prime for the Fair here in late July, (1932), but evidently providence thought I was altogether too much wrapped up in that one glad. At any rate, two days before the fair, just as the lower floret was opening, I went out in the morning to take my daily look at the huge spike that was already nearly 6 feet tall. I was intending to cut it and take it to the basement for safe and careful keeping. You can possibly imagine my disappointment and righteous wrath when I found that a demon-possessed grasshopper had flown in during the night, and seeing the Golden Chimes towering up above all the rest, ate a lunch out of the stalk just above the sixth floret. The other 18 buds were so heavy that they had broken off where the hopper had weakened the stalk. The 6 florets that were left made a gorgeous spike by themselves, but I did not cut them to exhibit. It was a good stayer, the florets lasting 5 full days without wilting, out in the hot July sun without protection. The huge spike was perfectly straight until after the grasshopper chopped through. All in all, I feel that this was the finest spike I have ever raised in my 15 years or more of glad growing."

This wonderful strain of Giant Ruffled Pansies was originated by Mrs. Merton G. Ellis, and has in just a few years become world famous. The blooms are of wonderful shades and coloring beyond all description. They have very heavy texture, sweet fragrance and during good pansy weather a very large proportion of them will be over three, three and a half and even four inches across. They stand erect on very long strong stems and, cut with their very luxuriant foliage, just a few blooms arranged properly make a gorgeous display.

A customer from Oklahoma recently wrote: "I am delighted to find a strain that grows as large as advertised."

We greatly appreciate the many, many kind letters we have received from our customers telling of their success with the Oregon Giants.

CULTURAL DIRECTIONS

In most climates best results are obtained by planting Pansy Seed in the latter part of AUGUST or early SEPTEMBER. If planted much earlier the seedlings will be ready to transplant before the Fall rains start and they are apt to die out.

If seed is planted in OCTOBER, it is safer not to transplant till spring for in most climates the seedlings will not have time to become established before the freezing weather sets in.

Pansy Seed planted in the early SPRING will begin blooming about May and will produce blooms all summer. With good care they will be at their best and give their largest blooms in the Fall. The seed may be planted very early in the Spring in cold frames or hot-beds. When freezing weather is over they may be transplanted where they are to remain.

Sow the seed thinly in flats and just barely cover the seed with sifted soil. Press down with a flat board before sprinkling. More people get a poor germination because of planting the seed too deep than any other cause except by letting the flats or seed-boxes dry out. They must be kept moist, but care must be taken even in this respect. Damping off may result from too much moisture, irregular or other improper moisture conditions. Cover the seed-beds during the hot mid-day sunshine with a cloth frame. Protect them also when there is apt to be a heavy storm. Seed should germinate in about a week in August. It takes a little longer later in the Fall.

Transplant when the seedlings have three or four leaves if the weather conditions are favorable. Better to let them become a little crowded than to transplant during a hot dry spell. They should be planted out in the open where they will get plenty of sunshine and where they will remain for spring blooming unless the winter is apt to be entirely too severe. In some places they will need the protection of cold frames, but pansies will stand even some zero weather if protected by straw or peat moss placed around the plants but not completely covering them. Pansies that weather it through the winter out in the open will make the sturdiest plants, and produce the largest, finest blooms.

Pansies want especially rich soil. Well rotted horse, cow or sheep manures are good; also bone meal and other commercial fertilizers. Too much chicken manure is not advisable.

SPRING PLANTING IS DESIRABLE in climates too severe for the safe wintering over of plants from Fall-sown seed. Pansies are quite hardy and do well in nearly every climate.

When you order, if you will send us the addresses of three pansy growers, either professionals or amateurs, who do not now grow THE OREGON GIANTS, we will include with your order a Trial Packet (35 cent size) gratis, either for your own use or to give to some friend.

SUGGESTIONS FOR MARKETING PANSY PLANTS

People in general want to buy pansy plants in the spring and there is small retail demand for them at other times, so seed must be sown with this in mind.

There is great demand for small plants with from four to six leaves early in the spring. They stand transplanting well and customers will obtain splendid results from them.

There is even greater demand for BLOOMING plants in the spring though they will not stand transplanting as well. They look so attractive put up twelve to the pansy basket, each plant bearing a giant bloom. Each plant should be wrapped separately with newspaper around the roots but not covering up all the foliage. Early in the spring these baskets sell for 90c to \$1.00, sometimes more.

Often it pays better to wrap 50 or 75 separately and place them in a peach tray, letting customers select the plants they wish. They sell readily for 10 cents a plant, and the very best ones will go quicker still at 15 cents a plant. One customer wrote me that she was getting 50 cents a plant and could not supply the demand. People are willing to pay for the best.

Although there is a great demand for pansy plants, yet there is also much competition on public markets, etc., so it is important to have BETTER PANSIES than the others have.

In digging pansies for market it is important to wait until a plant has had a bloom wide open for at least a week. The blooms increase in size greatly after first opening, especially in the spring. It sometimes takes patience to wait for them, but it pays.

There is also good demand from florists for small pansy plants, transplanting size, in the fall. Some amateur gardeners also realize that it is better to buy small plants in the fall than blooming plants in the spring but in general the public buys the blooming plants.

WREXHAM DELPHINIUM SEED

\$1.00 per Packet

The Wrexham Strain produces a large proportion of very superior plants from seed. They produce tall, well-shaped bloom spikes with very large florets, most of them being double. The coloring is extremely beautiful with wonderful and varied combinations of delicate shades of blue, lavender, silver, cream and dark purple.

PLANTING DIRECTIONS

Plant the seeds either in early spring or mid-summer, in flats filled with rich soil. Cover with $\frac{1}{8}$ inch sifted soil.

Cover with either cloth or glass frame, glass preferred. If glass frame is used, place a single sheet of newspaper directly under the glass, not resting on the soil. This shades the soil and helps to retain the moisture. Keep quite moist. Remove shade gradually.

When the seedlings have 3 or 4 leaves transplant a foot apart. **Do not transplant during a hot dry spell.** If seeds are planted in summer, the seedlings should be transplanted into a cold frame for the winter. Bone meal is the best fertilizer for delphiniums.

COLUMBINE or AQUILEGIAS—A very choice strain, the seed-plants being selected from the famous Mrs. Scott Elliott Hybrids.

BIG DOLLAR BARGAINS IN GLADIOLUS BULBS

The bulbs in this column are of various sizes, running from large to small and designed to bloom all summer. The large bulbs will bloom earlier. The smaller bulbs should bloom later and make lots of bulblets and fine bulbs for next year. The number of bulbs for \$1.00 is placed before the variety name.

GREAT FLYING SQUADRON SET

One of the greatest offers of fine new Glads we have ever made. These are very new and very scarce.

3 bulbets Flying Squadron
2 bulbets Ben Hur
1 bulblet Golden Fleece
5 bulblets Golden Chimes
This Set for.....\$15.00

This last Spring a bulb of **Flying Squadron** was sent to Mr. Stannard for trial and you will note the result as stated in the above clipping from the Sunday Oregonian, of how he grew it shoulder high to a tall man, with 28 buds on the main spike and florets almost seven inches across. Not everyone will do as well as Mr. Stannard, for he knows Glads and how to grow them, but someone may do even better. This variety has not only size but is of a very beautiful color, a deep melting salmon pink. Per bulb, \$25.00.

Ben Hur is even taller. We expect to hear of this going over six feet. It is a beautiful light pink with florets of good size and a goodly number open. Per bulb, \$12.50.

Golden Fleece is the deepest yellow we have ever seen in the larger flowering varieties. And we have seen many yellows. Boy, but this is a good color! A tall straight spike of excellent size for cut flower use. This is so new and scarce we ought not to offer it yet, and we shall have to limit the number we can let go this season to very few. Per bulb, \$50.00.

Golden Chimes was sent out last season to several growers. We have not heard from a few. However, nearly all have reported it the most beautiful yellow they have yet seen. It is tall, with well placed florets, slightly ruffled and wide open. One grower reported it as one of the two giants in his garden, four feet tall with the spike not yet showing. At this writing we haven't heard as to how tall it finally got for him. Another reported it as being one of the very few to stand heat well. This Glad has a golden future. Per bulb, \$5.00.

The above are four of the very fine new Ellis Originations. One bulb of each of above for \$65.00.

If you order bulbs of any of the above, please state the size of bulb you prefer and we will come as near it as we can. Stocks of these are very limited and we may do well to furnish any size at all of some except for very early orders.

In our Bulbalog, issued usually in October, January and March, we list several hundred varieties of Glads, including many new varieties each year from many sources and also many of the Ellis Originations which are so fast gaining favor. Drop us a postal for the Bulbalog if you are not on our regular mailing list.

Striking New Glad Developed

BROWNSVILLE, Or., July 30.—(Special)—A remarkable new gladiolus variety originated by M. G. Ellis of Canby, Or., now undergoing test in the trial plots of Everett Earle Stannard, writer on floral subjects, is now abloom and has opened up florets very close to seven inches in diameter. There are 28 florets on the main spike. Very large, striking and beautiful are the orange-salmon flowers of this variety and there is a distinctive big ox-blood red feather in the throat of the mammoth florets. The plant in Mr. Stannard's garden is exceptionally tall, being shoulder high to a tall man. The variety has been given the name Flying Squadron.—Article appearing in Sunday Oregonian, July 31.

Our "Glad" Home

This is the building where your orders are handled, where the bulbs are stored and from which they are shipped. It is built of concrete and hollow tile brick. The bulbs are well cared for in the large storage rooms and basements here. Only careful and expert help is employed.

Both the Large and Medium size bulbs should give good blooms the first year. The Small bulbs should bloom a year later. Both the Medium and Small bulbs provide a way of getting a fine large bed of these beautiful flowers at very low cost. Florists are finding that the American grown tulip bulbs bloom earlier than the imported ones. Thus a large new field is being opened for the American bulb grower.

All Tulip and Daffodil orders should reach us not later than Sept. 25th. We plant immediately thereafter.

THE OREGON GIANTS

Finest Giant Ruffled Pansies

THE STRAIN THAT DOES NOT DISAPPOINT

Originated and Grown by

MRS. MERTON G. ELLIS + CANBY, OREGON

ACTUAL SIZE—Photo taken July 28, 1932, during *hot weather*—quite a severe test for pansies. At present writing (Aug. 12, 1932) there are thousands of pansy blooms in the garden measuring three inches and more in diameter. In the spring and fall, during cooler weather, they are considerably larger, sometimes reaching four inches and over. This strain has the reputation of keeping the size of the blooms during the summer exceptionally well.

If You Want BETTER PANSIES Than Your
Neighbors, Plant

THE OREGON GIANTS

Plant in August, September or October for your
spring pansy beds.

Plant in the Spring for your summer and fall beds.
